Professional Summary

MSP IT Support Technician supporting healthcare and business clients in a high-volume service desk environment with continuous inbound calls, concurrent remote sessions, and a demanding ticket queue. Troubleshoots Windows endpoints, Microsoft 365, Active Directory, Microsoft Entra ID (Azure AD), specialized applications, endpoint security, peripherals, and network connectivity. Maintains incident ownership through structured diagnostics, detailed documentation, vendor coordination, escalation, and clear technical handoffs.

Technical Skills

Microsoft 365 & Identity Administration: Outlook, Teams, Office applications, Active Directory, Microsoft Entra ID (Azure AD), account access, password resets, MFA, groups, permissions, licenses, shared mailboxes, and onboarding/offboarding

Endpoint & Desktop Support: Windows 10/11, workstation setup, user profiles, printers, scanners, monitors, audio and USB devices, imaging systems, and signature devices

MSP & Remote Support: ScreenConnect, ConnectWise workflows, ConnectWise Automate, IT Glue, remote diagnostics, ticket triage, queue management, and escalation documentation

Application & Security Support: Healthcare and business applications, authentication, permissions, licensing, connectivity, SentinelOne alert review, endpoint status validation, and antivirus/EDR review

Networking Fundamentals: TCP/IP, DNS, DHCP, Wi-Fi, VPN, IP configuration, link-state checks, switch-port review, and firewall interface validation

Professional Experience

IT Support Technician

Feb 2026–Present

Xceltek, Tulsa, OK

- Manage a high-volume MSP workload involving continuous inbound calls, concurrent remote sessions, ticket triage, client follow-ups, and 50+ daily ticket actions across healthcare and business environments.
- Administer Microsoft 365, Active Directory, and Microsoft Entra ID requests involving onboarding/offboarding, account access, password resets, MFA, groups, permissions, licenses, shared mailboxes, and sign-in issues.
- Troubleshoot Windows 10/11, Outlook, Office, VPN, DNS, Wi-Fi, printers, scanners, monitors, audio and USB devices, user profiles, workstation readiness, and connectivity issues; review switch-port and firewall interface settings while isolating network-path failures.
- Diagnose specialized healthcare and business application issues involving imaging platforms, practice-management software, authentication, permissions, licensing, connectivity, application bridges, and peripheral communication.
- Review SentinelOne and antivirus activity, validate alerts and endpoint status, document technical findings, and coordinate vendor or higher-tier review when further investigation is required.
- Own incidents through resolution or escalation by reproducing symptoms, testing likely causes, documenting results, communicating with users and vendors, and providing clear technical handoffs.

IT Support Technician (Contract)

Jan 2024–May 2024

BlaBlaCar, France

- Prepared, reset, and validated Windows workstations for deployment, confirming device configuration, login access, core application readiness, and end-user handoff.
- Resolved first-line workstation and account issues, documented completed checks and outcomes, and escalated unresolved problems with concise technical context.
